## Project Title: Flying Squirrel Microsite

I'd like to build this site as multiple pages, rather than a long, single-page website. Typical site navigation will appear across the top. There is enough interesting content and photography about flying squirrels to create separate, focused pages.

- **Home Page / Introduction** – Introduce basic facts about flying squirrels and set the tone for their fascinating ability to glide and adapt to nocturnal life.
- **Species** – Overview of different flying squirrel species found around the world, with emphasis on size, appearance, and regional differences.
- **Diet** – Description of what flying squirrels eat, how their diet changes by season, and how they store food.
- **Behavior** – Gliding mechanisms, nesting habits, and nocturnal behaviors.
- **Habitat** – Typical forest types and regions flying squirrels live in, including environmental adaptations.
- **Sources** – This page will list references, including the Wikipedia article ([Flying Squirrel](#)), and any image or data sources used in the microsite.
